

Monday 23<sup>rd</sup> July

TOPIC: ATOMIC CLOCKS AND QUANTUM METROLOGY

Sensing beyond the Heisenberg limit  
 Tarun Dutta *CQT, National University of Singapore* ..... 1

A master oscillator based on 48.5 cm long optical cavity as a reference for a universal synthesizer  
 Marco Schioppo *National Physical Laboratory*..... 2

E2 transitions between hyperfine structure components of the  $D_2^+$  molecular ion  
 Petar Danev *INRNE, BAS* ..... 3

Measurement of the Infrared Magic Wavelengths for the  $^{40}\text{Ca}^+$  Ion Clock Transition  
 Kelin Gao *Wuhan Institute of Physics and Mathematics (WIPM) of Chinese Academy of Sciences* ..... 4

Progress towards deployable primary pressure sensors based on lithium magneto-optical traps  
 Daniel Barker *National Institute of Standards and Technology*..... 5

Onsite calibration of time and length standards for atom gravimeters  
 Duan Xiaochun *Huazhong University of Science & Technology* ..... 6

Quantum Logic Spectroscopy with a  $^{40}\text{Ca}^+ / ^{27}\text{Al}^+$  mixed ion crystal  
 Milena Guevara-Bertsch *Institut for quantum optics and quantum information* ..... 7

Comparing Optical Clocks at  $10^{-18}$  level  
 Holly Leopardi *NIST/ University of Colorado*..... 8

Transportable optical lattice clock-measurement campaigns and characterisation  
 Silvio Koller *PTB* ..... 9

Spin squeezing of an atomic ensemble with  $10^{11}$  atoms  
 Han Bao *Fudan University*..... 10

Micro-integrated extended cavity diode laser with integrated optical amplifier for precision spectroscopy in space  
 Christian Kürbis *Ferdinand-Braun-Institut* ..... 11

Quantum metrology of displacements with diffusion: single photon recoil spectroscopy  
 Marius Schulte *Leibniz University Hannover*..... 12

Progress on a compact  $\text{Yb}^+$  optical clock  
 Marion Delehaye *Femto-ST* ..... 13

Explore cesium nuclear magnetic octupole moment with electronic  $6S_{1/2} \rightarrow 6D_{3/2}$  hyperfine transitions  
 Wang-Yau Cheng *Department of Physics, National Central University*..... 14

Remote and local comparisons of optical atomic clocks for geodesy and metrology  
 Filippo Bregolin *INRIM Istituto Nazionale di Ricerca Metrologica* ..... 15

The system of intra-object transmission of the strontium optical clock frequency to the primary standard of units of time, frequency and the national time scale  
 Denis Sutyrin *FSUE 'VNIIFTRI'* ..... 16

Development of optical clock modules for the creation of a portable optical frequency clock on ytterbium atoms Gleb Belotelov <i>FSUE 'VNIIFTRI'</i> .....	17
Cryogenic multi-path cavity made of monocrystalline silicon Piotr Morzyński <i>National Institute of Information and Communications Technology</i> .....	18
An optical frequency comb stabilized to an optical lattice clock laser through optical fiber networks Eunmi Chae <i>The University of Tokyo</i> .....	19
Weak measurement correlation spectroscopy for magnetic field sensing Qu Weizhi <i>Fudan University</i> .....	20
Theory of the high-quality magneto-optical resonances observed in a buffer-gas-filled vapour cell Aleksy Novokreshchenov <i>Institute of Laser Physics SB RAS</i> .....	21
High-sensitive all-optical magnetometer for nuclear magnetic resonance gyroscope Xinye Xu <i>East China Normal University</i> .....	22
A mercury optical lattice clock Valentin Cambier <i>CNRS SYRTE OP SU LNE</i> .....	23
Sideband cooling and transport of cold ytterbium atoms in a one-dimensional optical lattice Xinye Xu <i>East China Normal University</i> .....	24
TOPIC: COLD MOLECULES	
Ultracold Triplet Ground State $^{23}\text{Na}^6\text{Li}$ Molecules Hyungmok Son <i>Harvard University/MIT</i> .....	25
Two interacting molecules in a one-dimensional harmonic trap Anna Dawid-Łękowska <i>University of Warsaw</i> .....	26
Fermi degeneracy and evaporation in a gas of reactive polar molecules Giacomo Valtolina <i>JILA - CU Boulder</i> .....	27
Direct measurement of branching ratios, and progress towards laser cooling of barium monohydride Rees McNally <i>Columbia University</i> .....	28
Interactions of benzene, naphthalene, and azulene with alkali-metal and alkaline-earth-metal atoms for ultracold studies Pawel Wójcik <i>University of Warsaw</i> .....	29
Isotopic shift of atom-dimer Efimov resonances in K-Rb mixtures Kohei Kato <i>Osaka city university</i> .....	30
Two-photon spectroscopy of ultracold dipolar $^6\text{Li} - ^{40}\text{K}$ molecules Sofia Botsi <i>Centre for Quantum Technologies, National University of Singapore</i> .....	31
Testing the parity symmetry in chiral molecules using vibrational spectroscopy Mathieu Manceau <i>Laboratoire de physique des Lasers</i> .....	32
Towards laser cooling of AlF molecules Stefan Truppe <i>Fritz Haber Institute of the Max Planck Society</i> .....	33

Ultracold Lithium for Sympathetically Cooling Polar Molecules Sidney Wright <i>Imperial College London</i> .....	34
Collision studies of slow, cold polyatomic molecules Isabel Rabey <i>Max-Planck-Institut für Quantenoptik</i> .....	35
Long Coherence Times in Trapped RbCs Jacob Blackmore <i>Durham University</i> .....	36
Magic-Wavelength Molecular Clock and Ultracold Chemistry With Lattice-Trapped Molecules Christian Liedl <i>Columbia University</i> .....	37
Photoassociation and photoionization in a two-species Rb-Hg MOT Marcin Witkowski <i>Institute of Physics University of Opole</i> .....	38
Towards quantum simulations with ultracold KCs molecules Apichayaporn Ratkata <i>Joint Quantum Centre</i> .....	39
Towards ground state CsYb molecules Kali Wilson <i>Durham University</i> .....	41
The DESIREE storage ring Dag Hanstorp <i>University of Gothenburg</i> .....	42
Atom-molecule coherence in heteronuclear Yb-Li Alaina Green <i>University of Washington</i> .....	43
Towards trapping of a single molecule in an optical tweezer Sarunas Jurgilas <i>Imperial College London</i> .....	44
Ultracold YbF molecules for measuring the electron's electric dipole moment Michael Trigatzis <i>Imperial College London</i> .....	45
Control of atom-ion reactions at low temperatures Michael Mills <i>University of California, Los Angeles</i> .....	46
Optical transport of ultracold atoms for the production of groundstate RbYb Axel Görlitz <i>University of Düsseldorf</i> .....	47
Theoretical description of photodissociation of ultracold diatomic molecules Iwona Majewska <i>University of Warsaw</i> .....	48
Towards Magneto-Optical Trapping of Polyatomic Molecules Louis Baum <i>Harvard University</i> .....	49
Laser Cooling of Optically Trapped Molecules Loic Anderegg <i>Harvard University</i> .....	50
Order of Magnitude increased sensitivity to the electron electric dipole moment Zack Lasner <i>Yale University</i> .....	51
Is laser cooling without spontaneous emission possible? Daniel Comparat <i>Laboratoire Aimé Cotton (CNRS)</i> .....	52
Coherent control of ultracold ground-state $^{87}\text{Rb}^{133}\text{Cs}$ molecules in an optical trap Simon Cornish <i>Durham University</i> .....	53

Prospects for formation of ultracold RbSr molecules : Novel implementation of an optical Feshbach resonance  
 Adrien Devolder *Laboratoire Aimé Cotton, CNRS* .....54

State selection, magnetic trapping and coherent control of laser-cooled molecules  
 Luke Caldwell *Imperial College London* .....55

Electronic excitation-exchange and spin-orbit coupling in ultracold ion-atom collisions  
 Ruti Ben Shlomi *Weizmann institute* .....56

Optical clock spectroscopy in weakly bound molecules  
 Mateusz Borkowski *Nicolaus Copernicus University* .....58

Menagerie of MOTs  
 Kyle Jarvis *Imperial College London* .....59

Towards Direct Laser Cooling of Barium Monofluoride  
 Tim Langen *University of Stuttgart* .....60

TOPIC: FUNDAMENTAL TESTS ANS QUANTUM MEASUREMENTS

Quantitative optical spectroscopy of alkali-metal vapour in DC magnetic fields up to 0.4 T  
 Francisco Sebastian Ponciano-Ojeda *Durham University* .....61

Laser Induced Fluorescence and Optogalvanic Spectroscopy applied to find the magnetic splitting of energy levels of La I  
 Lukasz Sobolewski *University of Gdansk* .....62

Towards a high-density squeezed-light magnetometer  
 Charikleia Troullinou *ICFO* .....63

Continuum contributions to the atomic electric dipole moments  
 Pawel Syty *Gdansk University of Technology* .....64

Progress towards parity violation measurements in dysprosium  
 Arijit Sharma *Helmholtz-Institut Mainz* .....65

In-beam hyperfine spectroscopy of hydrogen and antihydrogen  
 Eberhard Widmann *Stefan Meyer Institute* .....66

Towards Ramsey-Comb Spectroscopy of the 1S-2S Transition in Helium Ions  
 Julian Krauth *Vrije Universiteit Amsterdam* .....67

A 10-nT level magnetic shielding for the 10-m long-baseline atom interferometer  
 Chuan He *Wuhan Institute of Physics and Mathematics, Chinese Academy of Sciences* .....68

Experimental upgrades to measure the electron’s electric dipole moment using YbF molecules  
 Christopher Ho *Imperial College London* .....69

Towards precision spectroscopy of the 2S-6P transition in atomic hydrogen  
 Vitaly Andreev *Max-Planck-Institute of Quantum Optics / Ludwig-Maximilians-University of Munich* .....70

High contrast EIT spectra in a hot atomic medium Yi-Hsin Chen <i>Department of Physics, National Sun Yat-Sen University, Taiwan</i> .....	71
Search for a violation of the Pauli Exclusion Principle with electrons in the LNGS underground laboratory Andreas Pichler <i>Stefan Meyer Institute for subatomic physics</i> .....	72
Measurement of the $^4\text{He } 2^3\text{S} - 2^1\text{S}$ transition in a magic wavelength optical dipole trap Wim Vassen <i>LaserLaB Vrije Universiteit Amsterdam</i> .....	73
Isotope shift, non-linearity of King plots and the search for new particles Amy Geddes <i>UNSW Sydney</i> .....	74
Quantum State Transportation of Rubidium Atoms inside a Photonic Waveguide Mingjie Xin <i>Nanyang Technological University</i> .....	75
Sub-Doppler Molecular Spectroscopy, Frequency Metrology, and PNC induced Optical Rotation Measurement based on NICE-OHMS Scheme with a High Finesse Cavity Tzu-Ling Chen <i>National Tsing Hua University</i> .....	76
Continuous motional sensing with highly dispersive medium Wui Seng Leong <i>Nanyang Technological University</i> .....	77
Enhanced nuclear spin dependent parity violation effects using the $^{199}\text{HgH}$ molecule Amy Geddes <i>UNSW Sydney</i> .....	78
Spatial entanglement patterns and Einstein-Podolsky-Rosen steering in Bose-Einstein condensates Matteo Fadel <i>University of Basel</i> .....	79
Precision spectroscopy of the $1\text{S}-2\text{S}$ transition in antihydrogen Graham Stutter <i>Aarhus University</i> .....	80
Theory of large-momentum-transfer Bose-Einstein condensate interferometers Jan-Niclas Siemß <i>Institute for Theoretical Physics, Leibniz University Hannover</i> .....	81
Coherence in a cold quantum matrix Yuki Miyamoto <i>Okayama University</i> .....	82
Measurement-induced nonlocal entanglement in a hot, strongly-interacting atomic system Jia Kong <i>ICFO-The Institute of Photonic sciences</i> .....	83
Coherent two-photon emission from hydrogen molecules towards neutrino mass spectroscopy Hideaki Hara <i>Okayama University</i> .....	84
Magneto-optical trapping in glass cell evacuated by Non-Evaporable Getters Takumi Oda <i>Tokyo Institute of Technology</i> .....	85
A strict experimental test of macroscopic realism in a light-matter interfaced system Xiao Liu <i>University of Science and Technology of China</i> .....	86
Measurement of the Fine Structure Constant as a Test of the Standard Model Richard Parker <i>UC Berkeley</i> .....	87
RF microplasmas with energies suited to selective cleaning of surface adsorbates in ion microtraps Mariam Akhtar <i>NPL / Strathclyde University</i> .....	88

Current Status of the JILA eEDM Experiment Kia Boon Ng <i>JILA, University of Colorado, Boulder</i> .....	89
Initial progress of high precision measurement of time-reversal symmetry violation in Thallium nucleus Konrad Wenz <i>Columbia University</i> .....	90
Comparative study of mechanical and structure properties of geopolymer matrices incorporated by nano-silica, nano-alumina and nano-zinc Zidi Zeineb <i>Faculty of science of gabes</i> .....	91
TOPIC: OTHERS	
International Union of Pure and Applied Physics <i>IUPAP</i> .....	40
Quantum sensing with laser-cooled atoms: from an experiment to a product Jean Lautier Gaud <i>Muquans</i> .....	92
The non-exactness of SWKB for additive SI potentials Constantin Rasinariu <i>Loyola University Chicago</i> .....	93
Shortcuts to Adiabaticity Assisted by Counterdiabatic Born-Oppenheimer Dynamics Callum Duncan <i>Heriot-Watt University</i> .....	94
Quenching interatomic Coulombic decay width by screening effect Petra Votavova <i>Institute of Theoretical Physics, Charles University</i> .....	95
High coherence superconducting artificial atom Long Bao Nguyen <i>University of Maryland</i> .....	96
High-efficiency cold-atom transport into a waveguide trap Ashby Hilton <i>University of Adelaide</i> .....	97
Optical pumping of <sup>87</sup> Rb atoms with Xe and high-pressure buffer gas in a cubic cell Hoon Yu <i>Hanwha Defense R&amp;D center</i> .....	98
Local rectification of heat flux Marisa Pons <i>Universidad País Vasco / Euskal Herriko Unibertsitatea</i> .....	99
Absorption Spectroscopy of Thallium forbidden transition with Amplitude- and Phase- Modulation Wei-Ling Chen <i>National Tsing Hua University</i> .....	100
Phase Locked Atomic Interferometers for Gravity Gradiometry Chester Camm <i>University of Southampton</i> .....	101
Monitoring Ultra Cold Gases in Situ and in Real Time by Ionization Sampling Max Eisele <i>Physikalisches Institut Uni Tübingen</i> .....	102
Strong Optical Forces on Atoms Using Adiabatic Rapid Passage Harold Metcalf <i>Stony Brook University</i> .....	103
Detecting universal properties of lattice models with entanglement Hamiltonians Tiago Mendes Santos <i>ICTP</i> .....	104

Ultracold atom-ion collisions in a laser-cooled ${}^6\text{Li}-{}^{40}\text{Ca}^+$ hybrid systemes Takumi Kojima <i>Osaka University</i> .....	105
All-optical metastable excitation techniques for precision noble-gas radio-isotope ratiometry using atom-trap trace analysis Philip Light <i>University of Adelaide</i> .....	106
The Electron Anity of Thallium by Laser Photodetachment Threshold Spectroscopy Dan Gibson <i>Denison Univ.</i> .....	107
Entanglement preserving local thermalization Chung-Yun Hsieh <i>ICFO The Institute of Photonic Sciences</i> .....	108
The $5P_{3/2} \rightarrow 6P_{3/2}$ electric quadrupole transition in atomic rubidium as a probe of the Autler-Townes effect Jose Jimenez Mier <i>UNAM</i> .....	109
Novel quantum technologies based on atomic vapour cells Robert Loew <i>University of Stuttgart</i> .....	110
Loss-rate measurement in a magneto-optical trap for metastable europium Yuki Miyazawa <i>Tokyo Institute of Technology</i> .....	111
Production and study of new neutron rich isotopes of heavy atoms Segey Zemlyanoy <i>Joint Institute for Nuclear Research</i> .....	112
Spectroscopy of the $5p_{3/2} \rightarrow 6p_{1/2}$ electric dipole forbidden transition in atomic rubidium Fernando Ramirez-Martinez <i>Instituto de Ciencias Nucleares, UNAM</i> .....	113
Sub-Doppler saturated fluorescence spectroscopy of the $5_{s1/2} \rightarrow 6_{p3/2}$ transition in room temperature rubidium atoms Lina Marieth Hoyos <i>Universidad Nacional Autónoma de México</i> .....	114
Mirrorless optical parametric oscillator inside an all-optical waveguide Sushree Subhadarshinee Sahoo <i>National Institute of Science Education and Research, Bhubaneswar</i> .....	115
Plasma environment effects on the decay properties of atomic K-vacancy states belonging to the oxygen and iron isonuclear sequences of astrophysical interest Patrick Palmeri <i>Université de Mons - UMONS</i> .....	116
HFR+CPOL and MCDHF oscillator strengths of strong electric dipole (E1) lines of $\text{U}^+$ of interest in cosmochronology Patrick Palmeri <i>Université de Mons - UMONS</i> .....	117
The Roentgen-term and related gems in atom-light interaction Matthias Sonnleitner <i>University of Innsbruck</i> .....	118
Holographically controlled 3D atomic population structures Adam Selyem <i>University of Glasgow</i> .....	119
Phonons dispersion curves of dielectric materials Said Talbaoui <i>University sultane moulay slimane, Faculty of sciences and techniques, benimellal Morocco</i> .....	120

TOPIC: QUANTUM COMPUTATION AND COMMUNICATION

Realization of a T<sup>3</sup> Matter-Wave Interferometer on an Atom Chip  
 Omer Amit *Ben-Gurion University* ..... 204

TOPIC: QUANTUM GASES

Interacting bosonic atoms in triangular lattices with varying geometry  
 Dan Stamper-Kurn *University of California* ..... 121

Realization of a fractional period adiabatic superlattice  
 Dimitris Trypogeorgos *JQI* ..... 122

Optical visibility and core structure of vortex filaments in a three-dimensional bosonic superfluid  
 Franco Dalfovo *INO-CNR BEC Center and University of Trento* ..... 123

Non-classical spin states with ultracold dysprosium atoms  
 Thomas Chalopin *Laboratoire Kastler Brossel, CNRS* ..... 124

High Sensitivity Rf Spectroscopy of a Strongly-Interacting Fermi Gas  
 Constantine Shkedrov *Technion - Israel Institute of Technology* ..... 125

Experiment of Newton Cradle in One Dimensional Bose Gas  
 Xuzong Chen *Peking University* ..... 126

Atom loading into a modulated optical dipole trap under  $\Lambda$ -enhanced gray molasses cooling  
 Ming-Shien Chang *Institute of Atomic and Molecular Sciences, Academia Sinica* ..... 127

Quantum reflection of ultracold atoms by a spherical surface  
 Rina Kanamoto *Meiji University* ..... 128

Roton in a many-body dipolar system  
 Rafał Ołdziejewski *Center for Theoretical Physics of the Polish Academy of Sciences* ..... 129

Particle-Hole Character of Higgs and Goldstone Modes in Strongly Interacting Lattice Bosons  
 Marco Fedele Di Liberto *Université Libre de Bruxelles* ..... 130

Fast rotating Bose gases in RF adiabatic potentials  
 Mathieu De Goër de Herve *Laboratoire de Physique des Lasers (LPL), Université Paris 13 and CNRS* ..... 131

Resummation of diagrammatic series with zero convergence radius for the unitary Fermi gas  
 Takahiro Ohgoue *University of Tokyo* ..... 132

Tunneling dynamics of a superfluid Bose-Fermi mixture in the Bose-Einstein-condensate-unitarity crossover  
 Zhenxia Niu *Renmin University of China* ..... 133

Laser Cooling at Resonance  
 Yaakov Yudkin *Bar-Ilan University* ..... 134

Quantum dark solitons in 1D quantum gases  
 Joachim Brand *Massey University* ..... 135

Excitation dynamics and dispersive shocks in spin-orbit-coupled Bose-Einstein condensates Peter Engels <i>Washington State University</i> .....	136
Staggered fluxes for Bose-Hubbard model in two leg ladder configuration Friederike Metz <i>Okinawa Institute of Science and Technology Graduate University</i> .....	137
Light scattering by cold interacting two-level atoms Ludovic Brossard <i>IOGS</i> .....	138
Droplet Phases in Dipolar and Rabi-Coupled Condensates Alberto Cappellaro <i>University of Padova</i> .....	139
Observation of the Higgs mode in a strongly interacting fermionic superfluid Martin Link <i>Universität Bonn</i> .....	140
Local control of transport in an atomic quantum wire Philipp Fabritius <i>ETH Zurich</i> .....	141
Evolution of Few-Body Correlations in Bose Gases Quenched to Unitarity Silvia Musolino <i>Eindhoven University of Technology</i> .....	142
Multi-second magnetic coherence in a single domain spinor Bose-Einstein condensate Silvana Palacios <i>ICFO</i> .....	143
Fermionic properties of two interacting bosons in a two-dimensional harmonic trap Pere Mujal <i>Universitat de Barcelona</i> .....	144
Non-linear resonances in $^{23}\text{Na}$ spinor condensates An Qu <i>Laboratoire Kastler Brossel</i> .....	145
Extended Bose-Hubbard Model with dipolar and contact interactions Jakub Zakrzewski <i>Jagiellonian University</i> .....	146
Low-momentum Bragg Spectroscopy of a Unitary Fermi Gas Carlos Claiton Noschang Kuhn <i>Swinburne University of Technology</i> .....	147
Observation of a dynamical sliding phase superfluid with P-band bosons Shengjie Jin <i>Peking University</i> .....	148
Quantum Bose-Fermi droplets Debraj Rakshit <i>Instytutu Fizyki PAN</i> .....	149
Physics of ultracold $\text{Yb-}^6\text{Li}$ and $\text{Yb-}^7\text{Li}$ mixtures Florian Schaefer <i>Kyoto University</i> .....	150
Single-particle properties and effective range corrections in a strongly interacting Fermi gas Hiroyuki Tajima <i>RIKEN Nishina Center</i> .....	151
Effect of a magnetic field on molecule-solvent angular momentum transfer Wojciech Rządkowski <i>Institute of Science and Technology Austria (IST Austria)</i> .....	152
Portable and flexible cold atom experiments Philip Ireland <i>University of St Andrews</i> .....	153
Temperature dependence of the Bose polaron in a Bose-Einstein condensate Magnus Graf Skou <i>Aarhus University, Department of Physics and Astronomy</i> .....	154

Superfluid flow of an annular Bose gas Hélène Perrin <i>LPL/CNRS - Université Paris 13 - IFRAF</i> .....	155
Real and imaginary part of conductivity of strongly interacting bosons in optical lattices Barbara Grygiel <i>Institute of Low Temperature and Structure Research, Polish Academy of Sciences in Wroclaw</i> .....	156
Pinning Transition of Bose-Einstein Condensates in Optical Ring Resonators Simon Schuster <i>Physikalisches Institut Tübingen</i> .....	157
Radiofrequency-Dressed Adiabatic Potentials to Observe Thermalisation of Two-Dimensional Quantum Gases Kathrin Luksch <i>University of Oxford</i> .....	158
2D fermionic dipoles at $T = 0$ Raúl Bombín <i>Universidad Politécnica de Cataluña (UPC)</i> .....	159
Variable potentials for thermalized light and coupled condensates Martin Weitz <i>University of Bonn, Institute for Applied Physics</i> .....	160
Induced transitions in the attractive Bose-Hubbard model Lev Khaykovich <i>Bar Ilan University</i> .....	161
Measurements with cold thulium atoms in optical dipole trap. Vladimir Khlebnikov <i>Russian Quantum Center</i> .....	162
Quantum scale anomaly and spatial coherence in a 2D Fermi superfluid Marvin Holten <i>University of Heidelberg</i> .....	163
Spinor gases of fermionic erbium atoms Gabriele Natale <i>University of Innsbruck</i> .....	164
Progress on the research on prototype of Cold Atom Physics Rack for the Chinese Space Station Jingxin Sun <i>Peking University</i> .....	165
Pair condensation theory for systems of trapped cold fermionic atoms Junichi Takahashi <i>Waseda University</i> .....	166
Bose-Einstein Condensates with Rotating Dipole Moments Srivatsa Badariprasad <i>University of Melbourne</i> .....	167
Further Cooling of Alkali Atomic Gas in “micro-gravity” on earth Wei Xiong <i>Peking University</i> .....	168
Grassmann Phase Space Theory for Fermions Bryan Dalton <i>Swinburne University of Technology</i> .....	169
Flat-band ferromagnetism of SU(N) Hubbard model on Tasaki lattice Ruijin Liu <i>Renmin University of China</i> .....	170
Entanglement and squeezing for two Bose Polarons Miguel Angel Garcia-March <i>ICFO</i> .....	171
Design of an ultra-cold atom setup in microgravity Bin Wang <i>Shanghai Institute of Optics and Fine Mechanics, Chinese Academy of Sciences</i> .....	172

Prospects of reaching the quantum regime in Li/Yb <sup>+</sup> Henning Fürst <i>Universiteit van Amsterdam - Institute of Physics</i> .....	173
Quantum Criticality and Tomonaga-Luttinger Liquid in One-dimensional Bose Gases Bing Yang <i>Physikalische institut</i> .....	174
Collisional cooling of trapped ions with ultracold atoms Sadiqali Abbas Rangwala <i>Raman Research Institute</i> .....	176
Frequency comb cooling of atoms Ticijana Ban <i>Institute of Physics</i> .....	177
Correlations of few-body quantum systems in position and momentum space Ralf Klemt <i>Heidelberg University</i> .....	178
Dysprosium dipolar Bose-Einstein condensate with broad Feshbach resonances Luca Tanzi <i>LENS</i> .....	179
Topological edge states and Aharonov-Bohm caging with ultracold atoms carrying orbital angular momentum Gerard Pelegrí <i>Universitat Autònoma de Barcelona</i> .....	180
Dynamical formation of the Bose polaron through impurity-bath decoherence Kristian Knakkegaard Nielsen <i>Department of Physics and Astronomy, Aarhus University</i> .....	181
Quantum probe spectroscopy for cold atomic systems Jordi Mur-Petit <i>University of Oxford</i> .....	182
Ultracold atoms in an optical kagome lattice Tiffany Harte <i>University of Cambridge</i> .....	183
Observation of Roton Mode Population in a Dipolar Quantum Gas Daniel Petter <i>Institute for Experimental Physics</i> .....	184
Controlling Spin Exchange of Single Impurities in a Bose-Einstein Condensate Artur Widera <i>Technische Universität Kaiserslautern</i> .....	185
Experimental realization of driven interacting many-body systems Michael Messer <i>ETH Zurich</i> .....	186
Full-Contrast Fermionic Hanbury Brown-Twiss Interference Philipp Preiss <i>Heidelberg University</i> .....	187
One-dimensional ultradilute quantum liquids Grigory Astrakharchik <i>UPC</i> .....	188
Selective inter-band transition by pulse sequences in 1D bichromatic Bose lattices Tomotake Yamakoshi <i>Univ. Electro-Communications</i> .....	189
Spin current in spin-orbit coupling Bose-Fermi mixture Ryohei Sakamoto <i>Tokyo Metropolitan University</i> .....	190

TOPIC: QUANTUM OPTICS AND QUANTUM NANOPHOTONICS

Ultralow mechanical dissipation for quantum optomechanics  
 Nils Johan Engelsen *École Polytechnique Fédérale de Lausanne*..... 192

Morphology-dependent thermal radiation from micron- and submicron-sized dielectric particles  
 Maki Tachikawa *Meiji University*..... 193

Storage of Single Photons Generated from Cavity-enhanced Spontaneous Parametric Down Conversion in Cold Atomic Ensembles  
 Ying-Cheng Chen *Institute of Atomic and Molecular Sciences, Academia Sinica*..... 194

Atom-chip interferometry with Bose-Einstein condensates  
 Matthias Gersemann *Institut für Quantenoptik, Leibniz Universität Hannover*..... 195

Phase Sensitive Amplification Enabled by Coherent Population Trapping  
 Pascal Neveu *Laboratoire Aimé Cotton*..... 196

Repulsive photons in a quantum nonlinear medium  
 Wenchao Xu *Harvard University* ..... 198

Two-photon interferences with paired photons generation in a two-level atomic ensemble  
 Shuyu Zhou *Shanghai Institute of Optics and Fine Mechanics, Chinese Academy of Sciences*..... 197

Active temporal mode purification of quantum dots emission by quantum memory  
 Shaobo Gao *University of Oxford* ..... 199

Quantum nondemolition measurement of mechanical motion quanta  
 Luca Dellantonio *University of Copenhagen* ..... 200

Exploring Two Photon Processes Mediated by an Atom  
 Vindhiya Prakash *ICFO-The Institute of Photonic Sciences*..... 201

1D Atomic Lattices For Atom-Photon Physics  
 Lucas Peng *California Institute of Technology* ..... 202

Deterministic quantum entanglement among three distant atomic ensembles  
 Zhihui Yan *Shanxi University*..... 203

Four-wave-mixing and entanglement of spatially separated light  
 Wanxia Cao *Fudan University* ..... 205

Statistics of Atom Pair Production by Four Wave Mixing  
 Christoph Westbrook *Institut d'Optique Graduate School*..... 206

Photons in the presence of parabolic mirrors  
 Rocio Jauregui *Instituto de Física, Universidad Nacional Autónoma de México*..... 207

Optical nanoantennas for light - matter coupling through parallel multipolar mechanisms  
 Piotr Gładysz *Institute of Physics, Faculty of Physics, Astronomy and Informatics, Nicolaus Copernicus University*..... 208

Interaction of an asymmetric two-level quantum system with light  
 Piotr Gładysz *Institute of Physics, Faculty of Physics, Astronomy and Informatics, Nicolaus Copernicus University*..... 209

Fast, noise-free memory for photon synchronization at room temperature  
 Ran Finkelstein *Weizmann Institute of Science*..... 210
