

Thursday 26th July

TOPIC: ATOMIC CLOCKS AND QUANTUM METROLOGY

Measurement of the hyperfine structure of the $5s5d\ ^3D_3$ state in ^{87}Sr using a hollow cathode lamp
 Takumi Sato *The University of Tokyo* 1

Progress in the stability and frequency uncertainty of strontium optical lattice clocks at NPL
 Richard Hobson *National Physical Laboratory* 2

Search for biomagnetism in venus-flytrap plants
 Anne Fabricant *Helmholtz Institute Mainz* 3

A geometrically asymmetric optical cavity for a spin squeezed ^{171}Yb optical atomic clock
 Edwin Pedrozo *Massachusetts Institute of Technology* 4

Quantum metrology with Rydberg atoms
 Sebastien Gleyzes *Laboratoire Kastler Brossel*..... 5

Tunable phase-locked laser system for quantum sensing applications
 Joseph Thom *M Squared Lasers Ltd*..... 6

Development of Yb optical lattice clocks at KRISS
 Dai-Hyuk Yu *Korea Research Institute of Standards and Science* 7

A compact grating magneto-optical trap for ultracold Yb
 Robert Fasano *National Institute of Standards and Technology*..... 8

Towards a spin-squeezed atomic gradiometer with multipass cells
 Vito Giovanni Lucivero *Princeton University*..... 9

MEMS fabrication and operation of 3D ion microtraps
 Alastair Sinclair *National Physical Laboratory* 10

Crossover from quantum cats to classical mixtures in ultra-cold atom interferometers
 Shane Kelly *UCR*..... 11

Novel atom interferometers with ultra-cold alkaline-earth atoms
 Nicola Poli *Università Degli Studi di Firenze*..... 12

Ramsey Spectroscopy with Frequency Displaced Jumps
 Moshe Shuker *NIST*..... 14

Spin self-rephasing in the system of several atoms
 Konrad Szymanski *Marian Smoluchowski Institute of Physics, Jagiellonian University*..... 15

Ytterbium optical lattice clocks supporting 1×10^{-18} frequency comparisons
 William McGrew *NIST*..... 16

Entanglement, interferometric sensitivity, and macroscopic superposition states by scanning through quantum phase transitions in spinor Bose-Einstein condensates
 Polina Feldmann *Leibniz Universität Hannover, Institut für Theoretische Physik* 17

Towards Quantum Logic Spectroscopy of Highly Charged Ions
 Piet Schmidt *PTB Braunschweig/LUH Hannover* 18

Dynamics of a Strontium Cold Atom Laser
 Mikkel Tang *Niels Bohr Institute* 19

Route to a Portable Optical Clock
 Yogeshwar Kale *Birmingham University* 20

Precision Measurements with Trapped-Ion Optical Clocks at NIST
 David Hume *National Institute of Standards and Technology*..... 21

Two clock transitions in neutral Yb for the highest sensitivity to variations of the fine-structure constant
 Sergey Porsev *University of Delaware* 22

TOPIC: FUNDAMENTAL TESTS ANS QUANTUM MEASUREMENTS

Fringe Visibility, Which-Way Information and Weak Value
 Sang Wook Kim *Kyung Hee University* 101

Sympathetic cooling of trapped ions for high resolution spectroscopy
 Thomas Louvradoux *Laboratoire Kastler Brossel* 102

Anderson Localisation Experiments with Ultracold Atoms in a 2D Programmable Potential
 Maarten Hoogerland *University of Auckland* 103

Atomic diffraction through nano grating for a novel Casimir-Polder potential measurement
 Gabriel Dutier *IG / University Paris13 / CNRS UMR 7538* 104

EDM³ : a new search for the electron electric dipole moment using molecules in a matrix
 Eric Hessels *York University* 105

Development of a hybrid atom chip.
 Julien Alibert *Laboratoire Collisions Agrégats Réactivité* 106

Precision microwave measurement of the $n = 2$ triplet P_1 to P_2 fine structure interval of atomic helium
 Eric Hessels *York University* 107

Parity-nonconserving interaction-induced light shifts in the $7S_{1/2} - 6D_{3/2}$ transition of the ultracold ^{210}Fr atoms to probe new physics beyond the standard model
 Takatoshi Aoki *The University of Tokyo* 108

Optical dipole force trapping of rubidium atoms for a dual-isotope co-magnetometer toward the electron electric dipole moment
 Aiko Uchiyama *Tohoku University* 109

Diffraction Phases in Large Momentum Separation Contrast Interferometry with Yb Bose-Einstein condensates
 Katherine McAlpine *University of Washington* 110

Dephasing due to Gravitational Interaction in Atomic Interferometer
 Sohritri Ghosh *University of Maryland, College Park* 111

Directional detection of dark matter using spectroscopy of crystal defects Ronald Walsworth <i>Harvard-Smithsonian</i>	112
Towards deployable atomic gravimeters for geophysics Zachary Pagel <i>University of California, Berkeley</i>	113
Reflecting on an alternative (parity-time-symmetric) quantum theory, and its analog in optics Ray-Kuang Lee <i>National Tsing Hua University</i>	114
Development of Multi-shell Magnetic Shields for Atomic Spin Gyroscope Zaeill Kim <i>Agency for Defense Development</i>	115
Investigating Particle Indistinguishability with a Freely Rotating Coulomb Crystal Erik Urban <i>University of California, Berkeley</i>	116
Experimental probe of the tunneling time for ultra-cold atoms Jesus Ramon Ramos Benitez <i>University of Toronto</i>	117
Precision Search for CP Violation with Polyatomic Molecules Nicholas Hutzler <i>California Institute Technology</i>	118
Realization of a 12 m atom fountain and suppression of wave-front-aberration phase noise in atom interferometers Jin Wang <i>Wuhan Institute of Physics and Mathematics, Chinese Academy of Sciences</i>	119
Generation of Atomic Beams of Highly Refractory Elements for Laser Spectroscopy Alonso Castro <i>Los Alamos National Laboratory</i>	211
High Sensitivity Ring Laser Gyroscopes for Geodesy and Fundamental Physics Nicolo' Beverini <i>INFN- Sezione di Pisa</i>	212
Towards high-precision spectroscopy of the 1S-2S transition in He ⁺ Fabian Schmid <i>Max Planck Institute of Quantum Optics</i>	213
Tune-out wavelength for the 1s2s ³ S state of helium Gordon Drake <i>University of Windsor</i>	214
Contribution to resolution of the proton radius puzzle via measurement of the n=2 Lamb shift in atomic hydrogen Eric Hessels <i>York University</i>	215

TOPIC: QUANTUM GASES

Repulsive self-generated lattice from a BEC in an optical resonator Davide Dreon <i>ETHZ</i>	121
Vortex Lattice Formation in a Stirred Bose-Einstein Condensate Emmanuel Mercado Gutierrez <i>Instituto de Fisica de Sao Carlos - Universidade de Sao Paulo</i>	122
A versatile apparatus for quantum simulation with ultracold dipolar Erbium atoms Bojeong Seo <i>The Hong Kong University of Science and Technology</i>	123

Few-mode Treatment of Interacting Bose Gases with Spin-Orbit Coupling Josep Cabedo Bru <i>Universitat Autònoma de Barcelona</i>	124
Progress toward single atom microscopy for ultracold Yb atoms in optical lattice Jongchul Mun <i>Korea Research Institute of Standards and Science</i>	125
Towards ultracold potassium-cesium mixture. Mariusz Semczuk <i>University of Warsaw</i>	126
Dynamics in the dissipative Fermi-Hubbard Model Lukas Freystatzky <i>University of Hamburg</i>	127
Global thermodynamic susceptibilities for harmonic trapped gases Freddy Jackson Poveda Cuevas <i>Universidad Nacional Autónoma de México</i>	128
Coherent inflation in Bose Einstein condensate. Sicong Ji <i>Atominstitut, Technische Universität Wien</i>	129
Time resolved study of competing instabilities on a Fermi gas quenched to strong repulsion Andrea Amico <i>University of Florence, LENS, CNR-INO</i>	130
Matter wave speckle observed in an out-of-equilibrium quantum fluid Pedro Ernesto Schiavinatti Tavares <i>Instituto de Física de São Carlos - USP</i>	131
A two species superfluid system to study quantum phases transitions in an atomic vortex lattice Pedro Ernesto Schiavinatti Tavares <i>Instituto de Física de São Carlos - USP</i>	132
Large arrays of bosonic atoms in optical tweezers Mark Brown <i>CU Boulder / JILA</i>	133
Complex Networks on Quantum States: From Quantum Phase Transitions to Emergent Dynamics of Quantum Cellular Automata Lincoln Carr <i>Colorado School of Mines</i>	134
Mixtures in radiofrequency-dressed potentials Elliot Bentine <i>Department of Physics, Oxford University</i>	135
Magnetically tunable Feshbach resonances in ultracold gases of europium atoms and mixtures of europium and alkali-metal atoms Klaudia Zaremba-Kopczyk <i>University of Warsaw</i>	136
Studying Quantum Turbulence in Two Species Superfluid: The State of the Art of NaK System Kilvia Mayre Farias <i>Instituto de Física de São Carlos - Universidade de São Paulo</i>	137
Bright Soliton to Quantum Droplet Transition in a Mixture of Bose-Einstein Condensates Julio Sanz <i>ICFO</i>	138
Anomalous expansion of turbulent Bose-Einstein condensates Gustavo Telles <i>University of Sao Paulo</i>	139
Thermodynamic measurement of the sound velocity of a Bose gas across the Bose-Einstein condensation Gustavo Telles <i>University of Sao Paulo</i>	140
Few-Photon-Level Atom-Mediated Cross-Phase Modulation at Room Temperature Steven Sagona-Stopphel <i>Stony Brook University</i>	141

Dark State Optical Lattice with a Subwavelength Spatial Structure Sarthak Subhankar <i>University of Maryland at College Park</i>	142
Quantum Monte Carlo description of dipolar droplets Ferran Mazzanti <i>Universitat Politècnica de Catalunya</i>	143
Dynamical transfer of vortex states between two coupled Bose-Hubbard rings Muntsa Guilleumas Morell <i>Universitat de Barcelona</i>	144
Matter Wave Subradiance with Bose-Einstein Condensates in an Optical Ring Resonator Philip Wolf <i>Physikalisches Institut Tübingen</i>	145
Non-linear spin dynamics in atomic magnetometers Rafal Gartman <i>National Physical Laboratory</i>	146
Studying Quantum Turbulence in Two Species Superfluid: Cooling Process for Potassium Specie Humberto Duque <i>Institute of Physics of São Carlos - USP</i>	147
Vortex lattices in binary Bose-Einstein condensates with dipole-dipole interactions Kishor Kumar Ramavarmaraja <i>Departamento de Fisica Experimental Instituto de Fisica, Universidade de Sao Paulo</i>	148
Ultracold collisional magnetic gradiometer Krzysztof Jachymski <i>University of Stuttgart</i>	149
A three-mode treatment of spin-1 ultra-cold quantum gases with spin-orbit coupling Josep Cabedo Bru <i>Universitat Autònoma de Barcelona</i>	150
Tomography of Correlation Functions in Sodium Bose-Einstein Condensates Haiyu Liang <i>Institute for Interdisciplinary Information Sciences, Tsinghua University</i>	151
Spin-orbit coupling in quantum systems: a quantum Monte Carlo approach Juan Sánchez-Baena <i>Universitat Politècnica de Catalunya</i>	152
Experimental determination of the equation of state of an interacting one-dimensional Bose gas. Francisco Salces-Carcoba <i>Joint Quantum Institute - University of Maryland & NIST</i>	153
Towards Quantum Many-Body Physics with Strontium in Optical Lattices Sebastian Blatt <i>Max-Planck-Institut für Quantenoptik</i>	154
Effective two-mode description of the dynamics of interacting bosons confined in a double-well trap Jacek Dobrzyniecki <i>Institute of Physics of the Polish Academy of Sciences</i>	155
Confinement-Induced Resonance of Alkaline-Earth-Metal Atoms in Anisotropic Quasi-one Dimensional Geometry Qing Ji <i>Renmin University of China</i>	156
Entanglement and dynamical phase transition in a spin-orbit-coupled Bose-Einstein condensate Fengxiao Sun <i>Peking University</i>	157
Finite-range Efimov physics in strongly-interacting Bose gases Paul Mestrom <i>Eindhoven University of Technology</i>	158
Josephson oscillation and self-trapping in momentum space Shijie Yang <i>Beijing normal University</i>	159

Efimov physics in the dynamical formation of unitary Bose gases Victor Colussi <i>Eindhoven University of Technology</i>	160
Generation of Bose-Einstein Condensates' Ground State Through Yongsheng Zhang <i>University of Science and Technology of China</i>	161
Self-bound quantum droplets of atomic mixtures in free space Giovanni Ferioli <i>LENS - European Laboratory for Non-Linear Spectroscopy</i>	162
Atoms, or Electrons and Nuclei? ISRE Nuclear and Electron Spin Waves in Spin-Polarized Atomic Hydrogen Lauri Lehtonen <i>University of Turku</i>	163
Singular loops and their non-Abelian geometric phases in ultracold spin-1 atoms Bharath Hebbe Madhusudhana <i>Georgia Institute of Technology</i>	164
Bosonic Mixture of Sodium and Potassium Alessandro Zenesini <i>University of Hannover/IQO</i>	165
Effective interactions in a quantum Bose-Bose mixture Sergey Andreev <i>ITMO University, Saint Petersburg</i>	166
Second sound in the BEC-BCS crossover Vijay Singh <i>ZOO/ILP, University of Hamburg</i>	167
How does a binary mixture separate in a three-well potential? Andrea Richaud <i>Politecnico di Torino</i>	168
Andreev-reflection and Aharonov-Bohm dynamics in atomtronic circuits Tobias Haug <i>Centre for Quantum Technologies</i>	169
Chaotic and regular spin-orbit entanglement of ultracold atoms Wenhua Hai <i>Hunan Normal University</i>	170
Uncover Topology by Quantum Quench Dynamics Wei Sun <i>University of Science and Technology of China</i>	171
Highly controllable and Robust 2D Spin-Orbit Coupled Topological Bose Gas Wei Sun <i>University of Science and Technology of China</i>	172
Ramsey interferometry with trapped motional quantum states Linxiao Niu <i>Peiking University</i>	173
Stability and excitations of droplet phases in dipolar and two-component condensates Tommaso Macrì <i>Federal University of Rio Grande do Norte</i>	174
Strongly interacting homogeneous Fermi gases Biswaroop Mukherjee <i>Massachusetts Inst of Tech-MIT</i>	175
Continuum of classical-field ensembles from canonical to grand canonical and the onset of their equivalence Joanna Pietraszewicz <i>Institute of Physics Polish Academy of Science</i>	176
Experimental realization of a supersolid-like stripe-phase in a spin-orbit-coupled Bose-Einstein condensate enabled by momentum-space hopping	

Sean Mossman <i>Washington State University</i>	177
Matter-wave optics with thermal and quantum degenerate atoms	
Ioannis Drougkakis <i>Foundation for Research and Technology Hellas</i>	178
An experiment for dipolar quantum mixtures of erbium and dysprosium atoms	
Claudia Politi <i>Institute for Quantum Optics and Quantum Information</i>	179
Experiments with dipolar Bose-Einstein condensates: quantum droplets, self-organization and superfluidity	
Tim Langen <i>University of Stuttgart</i>	180
Ultradilute quantum liquid drops	
Viktor Cikojević <i>Faculty of Science Split, Croatia</i>	181
TOPIC: QUANTUM OPTICS AND QUANTUM NANOPHOTONICS	
Non-Linear Two-Dimensional Atomic Arrays	
Maria Moreno-Cardoner <i>ICFO</i>	182
Quantum Batteries: Fundamental bounds and spin-system architecture	
Tymoteusz Salamon <i>ICFO</i>	183
Energy exchange between atoms and a Quartz Crystal μ -balance	
Oscar-Andrey Herera <i>University of Costa Rica</i>	184
Nanophotonic cavity QED with individually trapped atoms	
Tamara Dordevic <i>Harvard University</i>	185
Subradiance and radiation trapping in cold atoms	
Patrizia Weiss <i>Institute de Physique de Nice</i>	186
Atomic memory using higher-order nonlinear processes	
Gabriel Da Cruz Borba de Andrade <i>UFPE</i>	187
Atom-Light Interactions in Photonic Crystal Waveguides	
Alex Burgers <i>California Institute of Technology</i>	188
Enhancing optical nonlinearities in atomic ensembles to single-photon levels with photonic crystals	
Michal Bajcsy <i>Institute for Quantum Computing, University of Waterloo</i>	189
Towards a quantum communication platform using rare-earth chelates	
Tal Ohana <i>Weizmann Institute of Science</i>	190
High-efficiency backward four-wave mixing by quantum interference	
Yong-Fan Chen <i>Physics Department, National Cheng Kung University</i>	191
Single-Photon Interferometry with Frequency Comb States	
Tai Hyun Yoon <i>Korea University, Dept. of Physics</i>	192
Lasing from Cold Ytterbium Atoms	
Dmitriy Sholokhov <i>University of Saarland</i>	193

Coherent population trapping (CPT) versus electromagnetically induced transparency (EIT) Sumanta Khan <i>Indian Institute of Science</i>	194
Experimental demonstration of composite stimulated Raman adiabatic passage Alexander Bruns <i>Technische Universität Darmstadt</i>	195
Raman Gray Molasses Cooling of Cesium Atoms on the D2 Line Ya-Fen Hsiao <i>Institute of Atomic and Molecular Sciences, Academia Sinica</i>	196
Ultrabright, narrow-band photon-pair source for atomic quantum memories Pin Ju Tsai <i>Institute of Atomic and Molecular Sciences, Academia Sinica</i>	197
Random singlet phase of cold atoms coupled to one-dimensional photonic crystals David Li <i>ICFO</i>	199
Exchange of optical vortices using an electromagnetically induced transparency based four-wave mixing setup Hamid Reza Hamedí <i>Institute of Theoretical Physics and Astronomy, Vilnius University</i>	200
Coupled-cavities quantum electrodynamics with a cavity array in a single optical fiber Shinya Kato <i>Waseda University</i>	201
Stopped light pulses at the single-photon level in a laser-cooled ensemble loaded into a hollow-core fiber Thorsten Peters <i>Technical University of Darmstadt</i>	202
Collective scattering in nanofiber-trapped atomic ensembles Adarsh Shankar Prasad <i>Technische Universität Wien</i>	203
Atomic frequency comb quantum memory via piecewise adiabatic passage Daniel Viscor <i>UAB</i>	204
Phase-coherent light scattering from long trapped ion strings Lukas Slodicka <i>Department of Optics, Palacky University</i>	205
Exploring string patterns in the doped Hubbard with a Fermi gas microscope Daniel Greif <i>Harvard University</i>	41
Experimental implementation of a degenerate optical resonator supporting more than 46 Laguerre-Gaussian modes Cheng Zedi <i>USTC</i>	42
Experimental Quantum Simulation of a Coherence-Enhanced Microscopic Heat Engine in Diamond Jonas Nils Becker <i>University of Oxford</i>	43
Ultrafast many-body electron dynamics in a strongly correlated ultracold Rydberg gas and its application to ordered systems Akira Tanaka <i>Institute for Molecular Science</i>	44
Atomic quantum simulator of generalized lattice Wilson-Dirac fermions in (1+1) dimensions Yoshihito Kuno <i>Kyoto University</i>	45
Trapping ultracold atoms in sub-micron-period triangular and square magnetic lattices Peter Hannaford <i>Swinburne University of Technology</i>	46

Towards a register of single-atoms in a ber cavity for multi-particle entanglement Baghdad Mohamed <i>Laboratoire Kastler Brossel-ENS</i>	47
Phase transition kinetics for a Boes Einstein condensate in a periodically driven band system Eric Michon <i>Laboratory Collisions Agrégats Réactivité, Université Paul Sabatier</i>	48
Evaluation of polariton-number variances in the Jaynes-Cummings-Hubbard model with trapped ions Kyoichi Takayama <i>Osaka University</i>	49
Dissipative Bose-Hubbard system with metastable 3P_2 state of ytterbium atoms Takafumi Tomita <i>Kyoto University</i>	50
Antiferromagnetic spin correlation of SU(N) Fermi gas in an optical dimerized lattice Hideki Ozawa <i>Institute of Physical and Chemical Research</i>	51
Site-resolved imaging of a fermionic Mott insulator using ^{173}Yb Masato Takagi <i>Tokyo Institute of Technology</i>	52
Preparation of two-dimensional fermionic spin mixtures in a quantum-gas microscope apparatus Bruno Peaudecerf <i>University of Strathclyde</i>	53
Direct observation of incommensurate magnetism in Hubbard chains Guillaume Salomon <i>Max-Planck Institute for Quantum Optics</i>	54
Trapping ions in an optical lattice for quantum simulation Christoph Fischer <i>ETH Zurich</i>	55
Probing many-body dynamics on a Rydberg quantum simulator Alexander Keesling <i>Harvard University</i>	56
Strongly-correlated bosons on a dynamical lattice Przemyslaw Grzybowski <i>ICFO</i>	57
Synthetic atomic quantum systems with two electron fermions Lorenzo Francesco Livi <i>Università degli studi di Firenze</i>	58
Atomic interactions via diffractive light coupling for magnetic ordering and supersolids Thorsten Ackemann <i>University of Strathclyde</i>	59
Time-Dependent Solution of the Generalized Fano Model Hedvika Gedeonova <i>Institute of Theoretical Physics, Charles University</i>	60
Ultracold atoms in a two-dimensional optical quasicrystal Konrad Viebahn <i>University of Cambridge</i>	61
Simulation of Quantum Chemistry problems using cold atoms Javier Argüello-Luengo <i>Max Planck Institute of Quantum Optics</i>	62
Motional quantum state engineering of two heteronuclear atoms with spin-selective optical tweezers Kunpeng Wang Wuhan <i>Institute of physics and mathematics, Chinese academy of sciences</i>	63
Taking pictures of black holes: spatially-resolved imaging of cavity-mediated nonlocal interactions Gregory Bentsen <i>Stanford University</i>	64
Ba-Li: towards a quantum mixture of Barium ions and ultracold Lithium gases Amelia Detti <i>University of Florence</i>	65

TOPIC: RYDBERG AND ARTIFICIAL ATOMS AND MOLECULES

A room temperature single-photon source based on strongly interacting Rydberg atoms
 Tilman Pfau *University of Stuttgart, 5th Institute of Physics*66

Femtosecond multiphoton π -pulse control of Rydberg states in Rubidium atoms
 Iduabo John Afa *Universitat Politecnica de Catalunya*67

An enhanced optical non-linearity based on Rydberg electromagnetically induced transparency for pulses from 1 to 100s of photons
 Josiah Sinclair *University of Toronto*.....68

Ionic Impurity in a Bose-Einstein Condensate at Submicrokelvin Temperatures
 Kathrin Kleinbach *Physikalisches Institut, Universität Stuttgart*.....69

Single-shot Non-destructive Detection of Ensembles of Rydberg Atoms with Microwave Cavity Transmission Measurements
 Sébastien Garcia *ETH*70

Searching for magnetic micro-defects by magnetic field imaging that employs nitrogen vacancy centers in diamond crystal
 Andris Berzins *University of Latvia*.....71

Resonant enhancement of optical nonlinearities in a Rydberg gas
 Clément Hainaut *Physikalisches Institut*72

Rydberg optical Feshbach resonances in cold gases
 Rosario González-Férez *Universidad de Granada*73

Electronic Structure of the Rydberg Triatomic Molecule: $K(nI-KRb(vN))$
 Rosario González-Férez *Universidad de Granada*74

Coherent Control of Addressable Rydberg Atoms for Hybrid Quantum Information Processing
 Jonathan Pritchard *University of Strathclyde*75

Light-matter interface using cold-atoms coupled to hollow-core fiber
 Mohammad Noaman *Johannes Gutenberg University, Mainz*.....76

Van der Waals interactions of Rydberg particles near surfaces
 Johannes Block *Institut fuer Physik, Uni Rostock*77

Rydberg-Dressed Magneto-optical Trap
 Niamh Jackson *Durham University*78

Rydberg-mediated long-range interactions between stored optical photons
 Teodora Ilieva *Durham University*79

Rydberg excitation of a Bose-Einstein condensate and Mott insulator with a picosecond laser pulse
 Michiteru Mizoguchi *Institute for Molecular Science*80

Study of light storage with Rydberg-state electromagnetically-induced-transparency in cold rubidium atoms
 Bongjune Kim *National Tsing Hua University*81

Quantum Simulation of Energy Transport with Rydberg Atoms Sayali Ganesh Shevate <i>University of Strasbourg</i>	82
Stability study of the two-photon detuning using the Rydberg-EIT spectrum of laser-cooled atoms Ko-Tang Chen <i>National Tsing Hua University</i>	83
Single shot non destructive photon counting of microwave photons using slow Rydberg atoms Frédéric Assémat <i>Laboratoire Kastler Brossel</i>	84
Interacting Rydberg ions Chi Zhang <i>Stockholm University</i>	85
Coherent control of a trapped Rydberg ion Markus Hennrich <i>Stockholm University</i>	86
Circular Rydberg Atoms as a Tool for Quantum Simulation Rodrigo Cortiñas <i>LKB</i>	87
Towards continuous-wave terahertz laser via optically pumped Rydberg states Sambit Bikas Pal <i>National University of Singapore</i>	88
Rydberg Excitation of Lattice-trapped Ultra-cold Atoms on a Chip Klaasjan Van Druten <i>University of Amsterdam</i>	89
Rydberg interactions on an atom chip Julius De Hond <i>University of Amsterdam</i>	90
Nonequilibrium many-body spin dynamics in strongly interacting Rydberg systems Nithiwadee Thaicharoen <i>Heidelberg University</i>	91
Microscopic observation of Rydberg macrodimers at the single-atom limit Jun Rui <i>Max Planck Institute of Quantum Optics</i>	92
Circular Rydberg states in helium and $\lambda/4$ co-planar microwave waveguide resonators for hybrid cavity QED Alexandre Morgan <i>University College London</i>	93
Generation and detection of Rubidium 20s Rydberg atoms with coherent 420 and 1050 nm radiation Fernando Ramírez-Martínez <i>Instituto de Ciencias Nucleares, UNAM</i>	94
Advanced relativistic energy approach and many-body perturbation theory to computing radiation transition energies, probabilities and hyperfine structure constants for heavy ions Eugeny Ternoisky <i>Odessa State University - OSENU</i>	95
Relativistic theory of excitation and ionization of the heavy Rydberg atoms in a black-body radiation field Olga Khetselius <i>Odessa State University - OSENU</i>	96
Comprehensive calculations of photoabsorption and lifetimes of high-n states of Li Constantine Theodosiou <i>Manhattan College</i>	97
High resolution cold atom source of single ions using correlations and Rydberg blockade Robert Scholten <i>The University of Melbourne</i>	98
A Photon-Photon Quantum Gate Based on Rydberg Polaritons Stephan Dürr <i>Max-Planck Institute of Quantum Optics</i>	99

TOPIC: TOPOLOGY IN ATOMIC SYSTEMS

Quenched dynamics and spin-charge separation in an interacting topological lattice
 Luca Barbiero *Université Libre de Bruxelles*23

Signatures of quantum spin liquids in small lattices
 Abel Yuste *UAB, GIQ*.....24

Topological states in the Kronig-Penney model with arbitrary barriers
 Irina Reshodko *Okinawa Institute of Science and Technology*.....25

Hall conductivity of strongly interacting bosons in optical lattice
 Konrad Patucha *Institute of Low Temperature and Structure Research, Polish Academy of Sciences in Wroclaw*26

Anyons from Hard-Core Three-Body Interactions in One-Dimension
 Nathan Harshman *American University*27

Topological characterization of chiral models through their long time dynamics
 Maria Maffei *ICFO*28

Majorana Quasi-Particles Protected by Z_2 Angular Momentum Conservation
 Fernando Iemini *The Abdus Salam International Centre for Theoretical Physics*29

Floquet engineering of optical solenoids and quantized charge pumping along tailored paths in two-dimensional Chern insulators
 Botao Wang *Max Planck Institute for the Physics of Complex Systems*30

Artificial Gauge Fields with Atom-Chip Based Quantum Simulator
 Emine Altuntas *Joint Quantum Institute, National Institute of Standards and Technology and University of Maryland*.....31

Quench dynamics of a synthetic three-leg Hall ladder with ultracold neutral fermions in an optical lattice
 Jeong Ho Han *Seoul National University*32

Stability of Floquet topological phases against disorder
 Oles Shtanko *Massachusetts Institute of Technology*.....33

Evidence for the topological Anderson insulator
 Eric Meier *University of Illinois at Urbana-Champaign*34

Probing topology in out of equilibrium cold atomic systems
 Nur Ünal *Max Planck Institute PKS*35
